# The OSINTITALIA Challenge

Learn OSINT skills and test them against real world scenarios

**Introduction**

OSINTITALIA is a nonprofit association focused on the dissemination of Open-Source Intelligence (OSINT) for social and ethical purposes such as the fight against cyberbullying, revenge porn, disinformation, and the support in finding missing people.

According to its aims, OSINTITALIA takes part in the *CyberChallenge.IT program* by providing an introductory course and an OSINT challenge built as a capture the flag competition based on real world application.

**The challenge**

This challenge is designed as a capture the flag event and consists of a series of questions that vary increasingly in their degree of difficulty, and that require participants to exercise different skillsets to solve. Once an individual question is solved and the player gives the correct answer, a "flag" is given to the player and he/she can go on to next question, earning points.

The questions refer to a single case related to a former missing person that have been recently found safe. Players are required to find specific information about the subject that can have helped Law Enforcement in finding this person. Some of the questions about the subject can include finding usernames, geolocating an image, finding relatives' names or best friends' names, etc.

At the beginning participants will be given an URL pointing to the basic information of the missing person.

**Rules:**

- Carefully read the questions and follow the instruction to give the answers correctly.
- Participants cannot go on to the next question if they do not give the correct answer to the previous question.
- Take part in this competition responsibly: no hacking or similar practices are allowed. The questions do not require any of them and if you are caught performing any of these kinds of behaviors you will be excluded by the competition and reported to Law Enforcement.
- Respect the privacy of people: participants cannot engage target person or relatives, parents o friends nor any law enforcement.
- Respect the privacy of people: participants cannot ask for friendship or following or liking posts or tweets, etc, or join the same social media group, etc, on social media of the target person or his/her relatives, parents, or friends.

**Tools**

Participants are not required to set up specific tools, however, please note that a VPN can be necessary to access some information and to protect your privacy. Installing Firefox and Chrome at least is required.
